

Article IX. A. Employee Workload 5 (c)

c. Mass lecturing is defined as instruction by a single faculty member to sixty (60) or more students in the lecture portion of a lab/science course. It does not apply in lecture/recitation courses where one or more sessions use combined mass lecturing session(s) subdivided into small groups.

Faculty teaching mass lectures as defined above will have their maximum annualized teaching assignments reduced by three (3) contact hours if there are 60-96 students and by five (5) contact hours if there are ninety-seven (97) or more students.

d. Lecture/recitation is defined as instruction by a single faculty member of 48 or more students in a course in a combination of group lecture and multiple recitation sections. Class size of 48-84 subdivided into three recitation sections will be the equivalent of 6 credit/contact hours. Class size of 85-112 subdivided into four recitation sections will be the equivalent of 9 credit/contact hours. Multiple lecture/recitation offerings of a course in any given semester by a single faculty member would require the approval of the Academic Dean.

e. Other than Distance Learning formats, scheduling and compensation for special teaching formats, which do not match the definitions of mass lecture and lecture/recitation as stated above will require approval of the Associate Dean for the Division and the Academic Dean. The Faculty Association President will be notified, in a timely manner, of the approval. Following the second offering of a new special teaching format, upon recommendation of the Associate Dean for the division and the approval of the Academic Dean, scheduling and compensation for that teaching format will become operationalized (no longer requiring approval and notification).
